(a) Decile Reliability Diagram

Note: *Prevalence baseline (OOF) uses 5-fold out-of-fold predictions with* $(\bar{p}, \bar{h}) = (0.3398, 0.3381)$*, ECE = 0.0017, The in-sample constant reference yields ECE = 0.0000 (degenerate one-bin artifact) and is not plotted.*

(b) Calibration Bin Occupancy ($N = 50$)
